

GLASS ROOM DESIGNS

Walls

Sunrooms and Patio Enclosures are made of a heavy-duty extruded aluminum framework combined with 2", 3", or 4" thick wall panels with EPS (Expanded PolyStyrene) foam core. You may choose from a choice of beautiful textured aluminum, rugged stucco siding, rough sawn cedar siding, or our unique Duratex panels to find the look that blends perfectly with your style of home.

Colors

We offer an array of colors* as well as your choice of distinct textures that will make it easy to design a Sunroom Patio Enclosure that perfectly complements your home.

Electrical

Optional electrical raceways in the walls and ceiling open up the possibility for fans, distinctive lighting solutions and wall receptacles.

Roof

Our roof styles include gable and studio. The solid roof features insulated LRP (Laminated Roof Panels) that have a unique EPS foam core. This core is a great insulator against the outside elements. Options include 3", 4", and 6" thick roof systems, skylights, and electrical raceways for ceiling fans and lighting.

Windows

A wide selection of windows is available to satisfy your specific needs and desires for your new Sun Room. Choose from horizontal sliding glass, acrylic, flexible vinyl pane windows or vertical 4-track vinyl pane windows. Our Millennium window comes with tempered safety glass and is known for ease of operation. We offer custom designed Sunrooms and enclosures with an array of door, window, wall, and roof options that allow you to create a new space that compliments your lifestyle and the architecture of your home. Includes transferrable Limited Lifetime Warranty.
