

### 3 Styles Available

**Insulated LRP (Laminated Roof Panel)** - Insulated LRP roof panels are made with an EPS (Expanded Polystyrene) foam core. EPS is a high-performance insulation specified by architects nationwide for many of today's energy efficient homes. Using these insulated panels with our patio components will create a strong, durable Patio Cover or carport

**Flat Roll Form Covers** - Patio Cover/carports provide economical, solid shade that protects you and your home from inclement weather and harmful UV rays while also providing shade for relaxing.

**Deluxe (lattice wrap)** - Combine solid insulated LRP with embossed aluminum rafters to give enhanced dimension and style to your new Patio Cover.

### What is Insulated LRP?

Insulated LRP is a Laminated Roof Panel. This panel is made of an EPS (Expanded Polystyrene) foam core. This core is an excellent insulator. The EPS core has embossed aluminum skins laminated to both sides using industrial strength polyurethane adhesive. The skins and EPS core are pressurized to form a strong, durable bond.
